

RAPHAEL ROCHA

Fullstack Engineer

010-2303-8238 • Seoul, South Korea • raph0222@naver.com • <https://raphael-rocha.xyz> • Visa Status : E-7

Working Experience

PhyxUp Health

Software Engineer

Remote Therapy Monitoring SaaS

Seoul, South Korea

02/2025 - Present

- Developed and maintained features across both the **frontend** and **backend**, contributing to the core business logic and application performance.
- Designed and implemented API endpoints, worked on Authentication of the app, enhanced code quality of legacy modules through structured refactoring, and introduced security improvements.
- Managed role and permission systems, implemented **WebSocket** communication using Soketi, and integrated logging and compliance mechanisms aligned with HIPAA and FHIR standards.
- Worked with **PostgreSQL** on Amazon **RDS**.
- Set up a new staging environment and defined the deployment pipeline, including Git flow, on **AWS** with **Cloudflare** handling DNS
- Improved **CI/CD** pipelines for both frontend and backend; handled mobile app packaging, versioning, and release for iOS and Android using GitHub Actions and Codemagic.
- Managed all services through **Docker** containers to ensure consistency across environments.
- Collaborated in an **Agile** team, regularly contributing ideas and feedback to improve the product and team workflows.

Backend : Django (DRF), Soketi

CI/CD : Docker, Git, Github, Github Actions, Codemagic

Cloud : AWS Services (EC2, RDS, S3...), Cloudflare (DNS, Pages/Workers)

Frontend : VueJs, Vuex, Tailwind, Vite/npm

Database : PostgreSQL

Atol Conseils et Développements

Software Engineer

IT Consulting Company

Dijon, France

06/2023 - 07/2024

- Contributed to multiple projects across different stacks, handling feature development and bug resolution on both **frontend** and **backend**.
- Frontend: Built and maintained interfaces using **Vue.js** and TypeScript.
- Backend: Developed business logic and RESTful web services using Java **Spring**, JAX-RS, and JOOQ; implemented security improvements and on-premise CAPTCHA systems; worked with OpenLayers and **Geoserver** for geospatial features.
- Database: Used PostgreSQL with PostGIS for spatial data and Flyway for schema migrations.
- CI/CD** :
 - Created and maintained Jenkins pipelines for build, release, and code review processes.
 - Wrote **Docker** based packaging scripts and handled RPM generation for legacy systems.
 - Integrated with Git and Gerrit for version control and code review workflows.
- Managed and upgraded demo server environments, upgraded Java versions and related dependencies, defined new packaging and deployment processes.
- Automated **Full server** setup using Ansible (Apache, SSH, etc.).
- Improved team workflow, project documentation, and deployment/versioning strategies.

Backend : Spring, Jax-RS, Apache, Tomcat, Maven

CI/CD : Docker, Git, Gerrit, Jenkins

Frontend : VueJs, Vuex, Tailwind, Vite/npm

Database : PostgreSQL, PostGIS

Departmental Council of Haute-Saone

Intern Web Developer (7 months)

Vesoul, France

10/2019 - 12/2021

03/2021 - 06/2021

Stack : Javascript, JQuery, postgresSQL, PHP/PHPMyAdmin, html/css

Education

Universite Franche Comte (UFC)

Bachelor's Degree - Computer Science

Dijon, France

Graduation : 2021

Summary

Hello, I'm Raphael, a fullstack engineer born in France, now working in South Korea. I have 2 years~ of experience as a developer. I'm currently working as a fullstack engineer in **PhyxUp Health**.

My main interests are backend development, DevOps practices and Cloud. I also did a lot of front development. I have the most experience in Vue and Spring. I also have experience working with Django. These days, I've been working a lot with Vue, Django, CI/CD workflows, Docker, AWS services and Cloudflare.

Being a developer is a truly fulfilling role for me, as it's a role where I get to learn and grow everyday. I always try to follow best practices, make thoughtful decisions to ensure the code I produce is clean, efficient, and easy to understand. Making software work is just the baseline. I also really care about building well-structured and well-documented systems that are easy to maintain and scale for the whole team. I believe in investing some time upfront to avoid messy code and technical debt that will slow everyone down later.

Experience in Korea

Manpower Korea

Part time : Worked as a Headhunter for IT position.

Seoul South Korea

12/2023 - 05/2022

Soft skills

Communication
Teamwork and listening
Adaptability
Always learning

Language

French : *Native*
English : *Full professional proficiency*
Korean : *Casual conversation*
